

# EVER PS AWIN BATCH VALIDATION DOCUMENTATION

*Order export module for Awin*

## PREREQUISITES

### Server

The Ever PS Product Notification module requires a minimal version of PHP 5.6, works with PHP 7

### Prestashop

The module works on Prestashop 1.6 to 1.7

## INSTALLATION AND CONFIGURATION

### Adding the module to your site

#### **Prestashop 1.6**

From your Prestashop administration interface, click on the "Modules and Services" tab.

Place the module on your site by clicking on the "Add a module" button and install it.

#### **Prestashop 1.7**

From your Prestashop administration interface, click on the "Modules" tab, then "Modules and services".

By adding the module on your site, it will install itself.

## Module configuration

First, determine for each error reported by Awin what is the associated command state

The screenshot shows two configuration sections for Awin error states. Each section has a title, a label for the error state, a dropdown menu for the command state, and a save button.

**Section 1: AWIN ORDER STATE CUSTOMER PAYMENT NOT SUCCESSFUL**  
Label: Order state for Awin state Customer payment not successful  
Dropdown: En attente du paiement par c  
Text: Please select an order state  
Button: Enregistrer

**Section 2: AWIN ORDER STATE CUSTOMER RETURNED ORDER**  
Label: Order state for Awin state Customer returned order  
Dropdown: En attente du paiement par c  
Text: Please select an order state  
Button: Enregistrer

Once the control status settings are set, determine the frequency on which you want to export the commands. Only orders from this time will be exported.

For example, if you decide to export orders less than two months old, select the option "Two months". All previous orders will be ignored.

The screenshot shows the 'PARAMÈTRES' section of the configuration interface. It contains three settings: a dropdown for export frequency, a dropdown for batch validation language, and a radio button for exporting prices with taxes.

**Section: PARAMÈTRES**

Order export frequency: Two monthes  
Text: Export all updated orders based on this frequency

\* Batch validation language: Français (French)

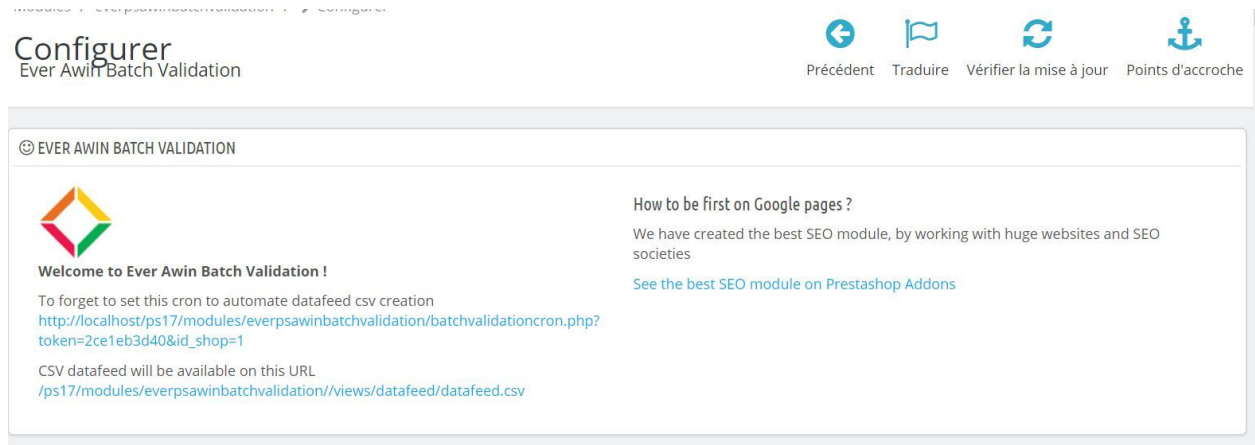

Export prices with taxes: OUI NON  
Text: Export orders prices with taxes ?

Button: Enregistrer

Specify the language of the export, and determine whether or not you want to export the prices of these orders with or without taxes.

Validate to save your configuration

In order to automate the export process, you will find in the header of the module configuration a URL to trigger a cron, as well as a URL to provide to Awin so that their system can automatically retrieve the commands.
