

# EVER PS CONTACT

## DOCUMENTATION

### *Unlimited contact forms module*

## PREREQUISITES

### Server

The Ever Contact module runs on versions from PHP 5.6 to PHP 7.

### Prestashop

The module runs on Prestashop versions 1.6 to 1.7

## INSTALLATION & CONFIGURATION

### Add the module to the shop

#### Prestashop 1.6

From your Prestashop administration interface, click on the "Modules and Services" tab.

Place the module on your site by clicking on the "Add a module" button and install it.

#### Prestashop 1.7

From your Prestashop administration interface, click on the "Modules" tab, then "Modules and services".

By adding the module on your site, it will install itself.

### Installer un module

## Configuration

### Module configuration

In the module configuration, you are asked to determine who will receive the forms emails.

This information can be modified in the "Contact" tab of your Prestashop.

⚙️ SETTINGS

Allowed contacts   
*Allowed SAV contact on contact page*

Use module contact page    
*Set yes stop using native form*

Form used for contact page   
*Theses informations can be changed on SAV*

 Save

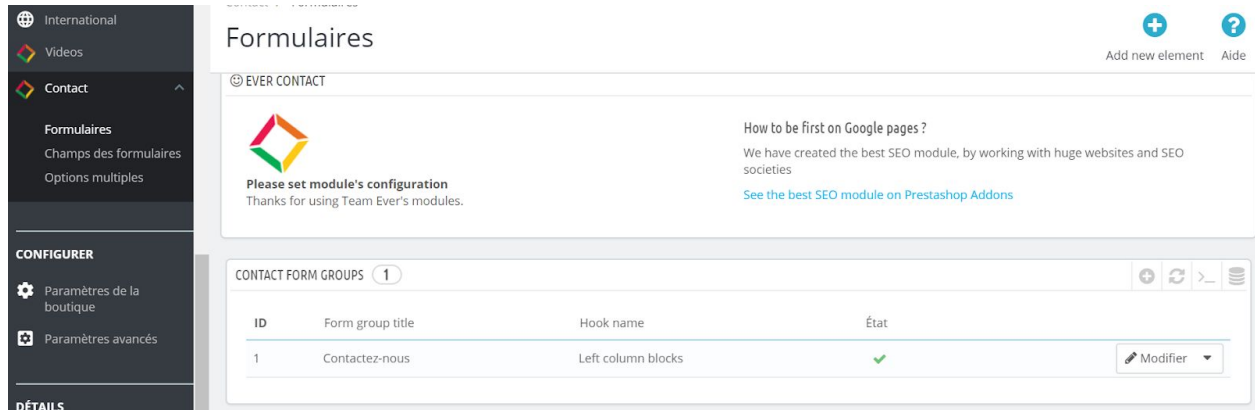

To take control of Prestashop's native contact form, you will need to create a complete form.

## Creating complete forms

The creation of a complete form takes place in three steps maximum.

### Création d'un formulaire

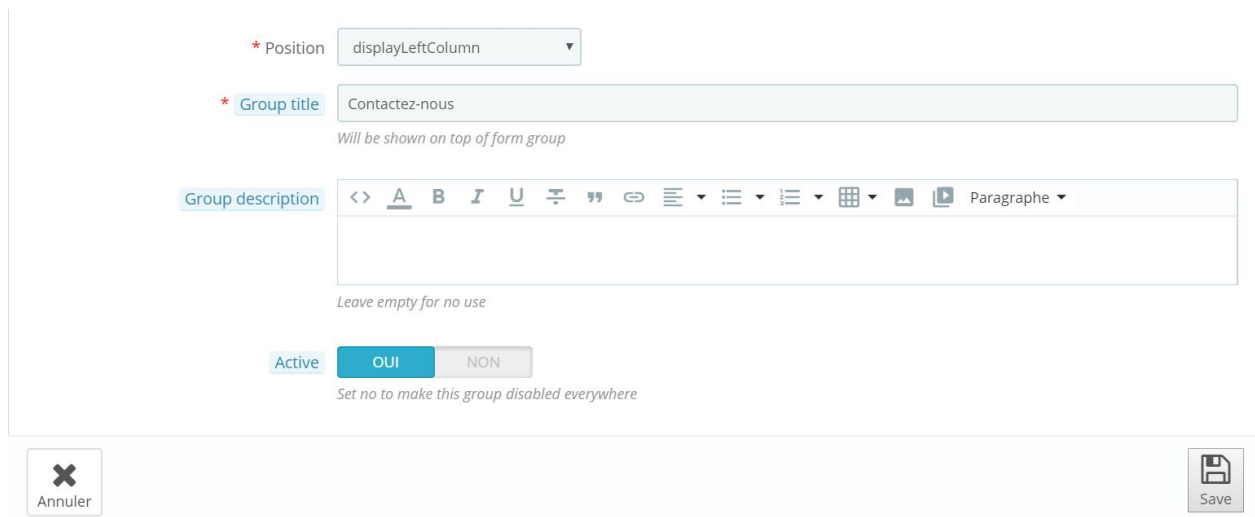

First, let's create one. The "Contact" tab then "Forms" will allow you to manage this.

The screenshot shows the Prestashop administration interface for managing forms. On the left, there is a sidebar with navigation options: International, Videos, Contact, Formulaires (with sub-options: Champs des formulaires, Options multiples), CONFIGURER (with sub-options: Paramètres de la boutique, Paramètres avancés), and DÉTAILS. The main content area is titled 'Formulaires' and features a '+ Add new element' button and a '? Aide' button. Below the title, there is a section for 'EVER CONTACT' with a message: 'Please set module's configuration Thanks for using Team Ever's modules.' and a link: 'See the best SEO module on Prestashop Addons'. Below this is a table for 'CONTACT FORM GROUPS' with one entry: ID 1, Form group title 'Contactez-nous', Hook name 'Left column blocks', and État '✓'. A 'Modifier' button is next to the entry.

At the top of the page, you will find a button allowing you to add a form.

Choose the desired location for the form, then give it a name. The description of the form is not required, you can leave it empty to avoid using it.

The screenshot shows the configuration form for a contact form group. It includes the following fields and options:

- Position:** A dropdown menu set to 'displayLeftColumn'.
- Group title:** A text input field containing 'Contactez-nous'. Below it, a note says 'Will be shown on top of form group'.
- Group description:** A rich text editor with a toolbar containing icons for bold, italic, underline, link, list, and paragraph. Below it, a note says 'Leave empty for no use'.
- Active:** A checkbox set to 'OUI' (Yes). Below it, a note says 'Set no to make this group disabled everywhere'.

At the bottom of the form, there are two buttons: 'Annuler' (Cancel) and 'Save'.

Determine whether or not the form is active before saving.

## Creating form fields

The next tab of the module allows you to manage the fields of the form you just created. The list of fields in place appears when you go to this page, namely in the "Contact" tab and then "Form fields".

Let's create one.

---

\* **Field title**   
*Will be used as default value*

**Field description**   
*Will be set under field*

\* **Form groups**

\* **Form group type**   
*Please choose type of form group*

**Fields are required**

*Please choose if all fields are required or not*

**Active**

---

Give the field a name, as the description is not required either. Determine in which form this field should appear, and choose from the drop-down menu the type of field (text, check box, etc.).

If you choose the "checkbox" or "select" field type, you will need to create the field options on another page.

Finally, specify if the field is fully required, and active, before saving this field and creating all the others you need for your form.

## Creating form options

Multiple options depend on your fields. You must therefore have a field of type select (drop-down menu), checkbox or radio, to use the options.

---

ID ▼ ▲	Field title ▼ ▲	Option title ▼ ▲	État	
--	<input type="text"/>	<input type="text"/>	<input type="text"/>	<input type="text" value="Rechercher"/>
<input type="checkbox"/> 1	Vous êtes	Un particulier	✓	<input type="text" value="Modifier"/>
<input type="checkbox"/> 2	Vous êtes	Une association	✓	<input type="text" value="Modifier"/>
<input type="checkbox"/> 3	Vous êtes	Une entreprise	✓	<input type="text" value="Modifier"/>
<input type="checkbox"/> 4	Vous êtes	Une collectivité	✓	<input type="text" value="Modifier"/>

Like previous tabs, you have a button at the top of the page to add an item.

\* Option title   
*Will be shown on front-office*

\* Option value   
*Will be used as default value*

\* Form field   
*Please choose field form*

Default checked  OUI  NON  
*Default checked only if checkbox*

Active  OUI  NON

Give the option a name, and specify the value. This will be retrieved by the module when submitting the form.

If your field is of type checkbox (or checkbox), you can pre-tick the box. However, this will not affect other types of fields (radio or drop-down menu)

Enable the option to make it available on the form.

Now that you have created a form, you can return to the module configuration to use this contact module to replace the existing one.
